A Solution for Games with Inadequate Information Liang Mao Lixin Yey Abstract We propose a framework to analyze a certain family of games called games with inadequate information, where an outside observer of a game intends to predict the payo outcome without knowing the players' interaction process

### **Whither Game Theory? Towards a Theory of Learning in Games**

Equilibrium theory does a poor job when people have inadequate time to learn about the game and the behavior of their opponents. As we have argued in the past, learning theory offers a way to improve and widen game theory's predictive power by shedding light on what sorts of equilibria to expect in various contexts (Fudenberg and
